

Industrial Strength: Commercial Solutions for NJ Businesses

In the commercial and industrial sectors, downtime is money. Equipment failure due to corrosion or wear can halt production lines and delay projects. For business owners in New Jersey, partnering with [Rustylions Powder Coating NJ](#) is a strategic move to extend the lifecycle of their assets and maintain a professional image.

Batch Processing and Production Runs

Rusty Lions is not just a custom shop; we are a production facility. We have the capacity to handle large batches of parts. Whether you are a manufacturer needing 1,000 brackets coated or a fencing company needing 500 feet of railing finished, we can accommodate you.

Our efficient workflow—from sandblasting to racking to coating to curing—ensures consistent quality across every single part. We understand tight deadlines and work with your production schedule to ensure on-time delivery.

Heavy Equipment and Machinery

Construction equipment, agricultural machinery, and snowplows take a beating. They are exposed to rocks, salt, chemicals, and constant friction. Factory paint jobs often fail within a few years of hard use.

Refurbishing your equipment with Rusty Lions is a fraction of the cost of buying new. We can blast and coat excavator buckets, plow blades, trailer frames, and hydraulic cylinders. Our industrial-grade powders are formulated for abrasion resistance and impact toughness. By searching for Rustylions Powder Coating NJ, you are finding a partner who understands the difference between a "decorative" coating and a "functional" coating.

Architecture and Infrastructure

We work with architects and developers on building components. Fire escapes, structural steel beams, window frames, and bollards. For these applications, we often use high-performance architectural powders that meet AAMA specifications for UV resistance and color retention.

This is crucial for commercial buildings where maintenance access is difficult. You don't want to be repainting a sign or a facade on the 10th floor every two years. Powder coating provides a "set it and forget it" solution.

Fleet Maintenance

Your fleet is a mobile billboard. Rusty trucks reflect poorly on your business. We help logistics and service companies refurbish their truck bodies, flatbeds, and lift gates. A clean, freshly coated fleet instills confidence in your clients.

The Rusty Lions Guarantee

We stand behind our work. We use only the highest quality powders from reputable manufacturers (like Prismatic Powders, Tiger Drylac, etc.). Our quality assurance process involves checking cure, adhesion, and thickness on every batch.

For businesses in Franklin, Paterson, Mahwah, and the surrounding areas, Rusty Lions is the reliable partner for all metal finishing needs. We offer pickup and delivery services for bulk orders to streamline your logistics.
